

Matrix Synapse Random

Optional Adminshell

If you forgot to write `sudo` and don't want to rewrite the whole command, just type `sudo !!` to execute the last command with `sudo` rights.

There is another way but you should **not** work like that all the time because its not secure. There is a reason you have to write `sudo` for a lot of commands. For an initial server setup you may have to type a lot of commands, to avoid typing `sudo` * all the time, it is possible to type in `sudo su`. This opens a admin-shell and you should be able to work without typing `sudo` in. Keep in mind, `exit` after step 8 and don't use `sudo su` when you just have to type in some commands.

Installing Bots

Matrix Synapse currently does not have a concept of bots, a bot is just a normal user. Usally there is a config and a `.py` file, download the files, unpack them and run the `.py` file. Running and downloading things via `pip` is not recommended.

Install python3

```
sudo apt install python3
```

then install pip

```
sudo apt install python3-pip
```

then matrix-bot-api from pyp

```
pip3 install matrix-bot-api
```

and finally fill out the config and start it

```
python3 pollbot.py
```
