

# Workstation1

Informations about this special snowflake.  
Who is the current owner, how to contact.

## Configuration Overview

Describe the hardware and host setup here, OS, CPU, Ram, etc. Purchase order type stuff.

### Hardware

#### Physical Workstation Additional Information

Heading 1	Heading 2
CPU & Core Count	2 Cores
RAM	4096 MB
Hard drives	25.00 GB
Make	N/A
Model	N/A
Serial	N/A
Service Tag	N/A
Purchase Order	N/A

#### Configurations

Heading 1	Heading 2
FQDN	Hostname.domain.local
IP	10.10.10.10
Subnet Mask	255.255.255.0
Default Gateway	10.10.10.1
Mac Address	00:AA:11:BB:22:CC
Trust Domain	joined or Standalone

### Additional Hardware

If a physical server other hardware not listed above. Such as NIC, Raid controller and anything else.

### Software

#### Used OS

Linux 2.6.x

Windows 10 Professional

## System Software

List, in general, the software installed on the server. Operating system updates are omitted. Include anything at all out of the normal install.  
Include Runtimes such as .net and C++ etc.

Software Name	Version	Reason
Software1	1.0.1	Does function1
Software2	1.0	Runtime dependency

## Backup & Recovery Plan

This is where you list local backups, network backups, tape backups, and put any backup schedules down to paper. Keep this updated. Don't omit RAID drives while they are not backup and recovery they should still be listed for documentation purposes.

And always remember the goal is to recreate the data and services. Not to put stuff on tape. No matter how you recreate the data or service, those resources are your backup.

## Installation Notes

Anything special about the install & the vendors that provide it goes here. Kind of an errata section.

## Troubleshooting Sequences

General steps for services to reboot or steps needed to be performed to reboot the machine
