- Security Controls
- Servers
- Support

Explanation

Examples

Some examples can be found, a example template in In-House and one example for software under Open Source. -Applications –In-House —Template –Open Source —Keepass

Templates

A “*template.txt” is for current the namespace/category its in and a “*_template.txt” is for the current namespace/category and every other one below.

Lists

List as used above (“Subcategory:” and “Pages in this subcategory:”) while hiding if one of this two points is empty.

```
<nspages -h1 -subns -exclude -textNS="Subcategories:" -textPages="Pages in this subcategory:" -hideNoPages -hideNoSubns>
```
