- Template
- Open Source
- Keepass
- Policies

Templates

A *“template.txt”* is for current the namespace/category its in and a *“%%”_template.txt”%%* is for the current namespace/category and every other one below.

If a new Site is created the following template is used:

```
=====@!PAGE@====  
Description of this namespace. \\  
<nspages -h1 -subns -exclude -textNS="Subcategories:" -textPages="Pages in  
this subcategory:" -hideNoPages -hideNoSubns>
```

Lists

List as used above (“Subcategory:” and “Pages in this subcategory:”) while hiding if one of this two points is empty.

```
<nspages -h1 -subns -exclude -textNS="Subcategories:" -textPages="Pages in  
this subcategory:" -hideNoPages -hideNoSubns>
```
